---

Thanks for checking on the scanning Bob. The handwritten notes on the bottom of the MOA would appear to show the line of thought about the 11 formations.

Thanks for the update. I attempted to send the same materials separately. These material were made into pdfs without the scanner. For the original submissions, these were put on the scanner and showed up in my email as ok. There are blank pages because the scanner copied the documents backside for some reason, but I have verified that all the pages to the three documents are present. In any event, the HQ CA DOGG file is still under review by Joe and myself and now OGC (Leslie Darman) has gotten involved.

I am looking at every piece of material in the file as my time allows to get some better insights why there are 11 aquifers in dispute as exempted.

**Importance:** High

Hi Bob,

It would appear that when these were scanned they were not scanned properly? We are seeing some mirrored pages which I cannot tell if they were inserted into the document feeder the wrong way or if we have them. Can you please check what you sent to us and verify these are all the pages in the documents? Thanks!

Michele, this is the first installment of some of the relevant documents for CA DOGG primacy:

1. Letter from M. G. Mefferd (State Oil & Gas Supervisor) to Mr. Nathan Lau responding to additional information (dated stamped 03/31/82). Focus on attachment #2
2. Letter from Deputy Attorney General to Mr. Richard E. Reavis (Region IX). Note attachment # 2 "Exempted 1425 Demonstration Aquifers." (date stamped 12/06/82)
3. Action Memo AA recommendation for primacy approval to EPA Administrator.

There will be additional documents depending on our discussion with HQ management. If these document don't get through let me know as MS Outlook has a limit on size.
